

# QIS Developer Tool Kits for JD Edwards

**Quality Innovative Systems, Inc. (QIS)** introduces QIS Developer Tool Kits (QI DevTK™) for Oracle JD Edwards software development. Over the past decade QIS has performed extensive custom development work for many customers across a variety of industries. To make our development work quicker, easier and more reliable we developed our own set of developer tool kits. These tool kits have standardized our software development methodology to ensure we meet Oracle's strict and time proven development requirements. We are now offering these same patent-pending tools to all JD Edwards developers.

**"Using QI Systems' Developer Tool Kits can saved JD Edwards customers hundreds of hours in EnterpriseOne development time. These tools are easy to use, efficient and reliable."**

## Developer Tool Kits

### Imbedded BI Publisher Templates

- ▶ Purchase Orders
- ▶ Purchase Orders with Bar Code
- ▶ Work Orders
- ▶ Work Orders with Bar Code
- ▶ Standard Invoice
- ▶ Packing Slip
- ▶ Packing Slip with Bar Code

## QIS President Says...

"I've done custom software development work in JD Edwards for over 15 years now. I even worked as a developer for JD Edwards back in the mid 90's to help develop their Utility Customer Information System (UCIS) - System Code 19. I was always looking for tools to make my job easier. Sometimes they simply didn't exist. So I started developing my own tools so I could get the job done for my customers", says **Donnie Law, President of QIS**. "Now, after all these years, I've made these same tools available to all JD Edwards developers. You'll find them self intuitive and easy to deploy. Through these tools I hope in some way I can help you become a better JD Edwards developer, whether you're a rookie or seasoned veteran."
