

## Uses of QI FCM

### FINANCE

- ▶ Fee & Interest Calculations
- ▶ Reporting totals and sub totals on Balance Sheet
- ▶ Income Statements
- ▶ Cash Flow reports
- ▶ "What-If" Scenarios

### MANUFACTURING

- ▶ Shop Floor Control
- ▶ Performance Analysis
- ▶ Variance Reporting

### INVENTORY

- ▶ Product Cost Analysis

### DISTRIBUTION

- ▶ Sales Performance Analysis
- ▶ Vendor Performance Analysis
- ▶ Complex Pricing
- ▶ Complex Freight

### IMPLEMENTATION

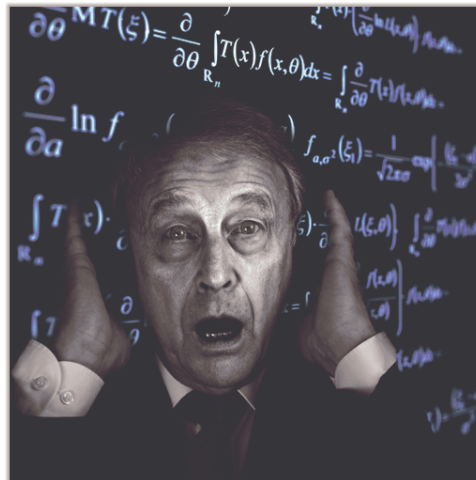

- ▶ As Easy as a Project in E1
- ▶ Live in 15 to 30 Days
- ▶ No Changes to IT Environment
- ▶ No Additions to the IT Staff
- ▶ Enable Power Users
- ▶ No Hard Coding
- ▶ Developer Too Kit

# System-Wide EnterpriseOne Flexible Calculation Module (QI FCM™)

## Customer Says...

"QI Systems' Flexible Calculation Module (QI FCM™) has enabled us to simplify the setup and maintenance of complex billing rules. What used to be maintained outside of the system is now maintained inside EnterpriseOne with QI FCM. We now have a flexible, centralized data entry system that gives us the ability to accommodate any formula calculation scenario. Other immediate expected benefits from using the QI FCM include a 40% reduction in person hours to process all of our billing rules and improved reporting capabilities." – **Brian Lord, Manager of Corporate Systems, Boston Properties, Inc.**

## QIS President Says...

"Our Flexible Calculation Module is designed to help JD Edwards EnterpriseOne customers simplify calculations that are difficult to do with standard JD Edwards' functionality and also enables calculations that are done by third party software to be done easily within the core functionality of Edwards", said **Donnie Law, President of QIS**. "It's the core calculation engine we have used in our real estate and utility billing software enhancements, but it also opens up all of EnterpriseOne to use Excel like Formula based calculations. With our FCM you don't have to hard code calculations in programs."

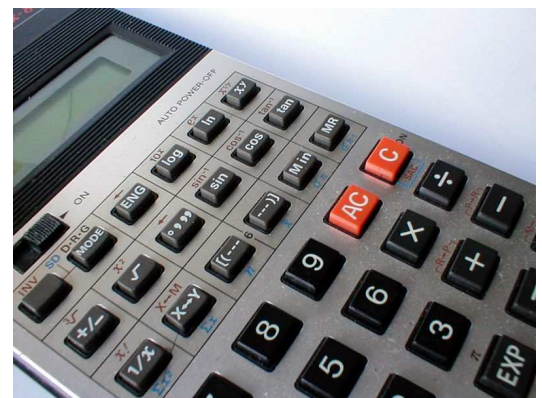

**Quality Innovative Systems, Inc. (QIS)** introduces the system-wide Flexible Calculation Module (QI FCM™) for Oracle JD Edwards EnterpriseOne™ (E1) customers. Now E1 customers can do complex mathematical formula calculations much easier, faster and more accurately.

## System-Wide Calculator

QI FCM™ is a powerful Microsoft® Excel like scripting language tool that allows users to calculate all formulas related to their business. QI FCM is as easy to use as a scientific mathematical calculator and helps users set-up and maintain complex formulas by using simple IF, THEN, or ELSE statements without having to get time constrained IT resources involved. This comprehensive tool accesses information from any data source and its use is applicable across all functional areas including finance, human resources and payroll, distribution, inventory, manufacturing, IT, and more.

## Eliminate E1 Hard Coding

Power users can now create and manage their own formula calculations without IT having to hard code any programs inside EnterpriseOne.

QIS, QI Systems, QI FCM and Flexible Calculation Module are trademarks of Quality Innovative Systems, Inc. Oracle, JD Edwards, and EnterpriseOne are registered trademarks of Oracle and/or its affiliates. Excel is a trademark of Microsoft Corporation.
